

### **Industrial Sheeting Lines**

### **High Capacity Donut Systems**

### **Specialty Cutters and Dies**

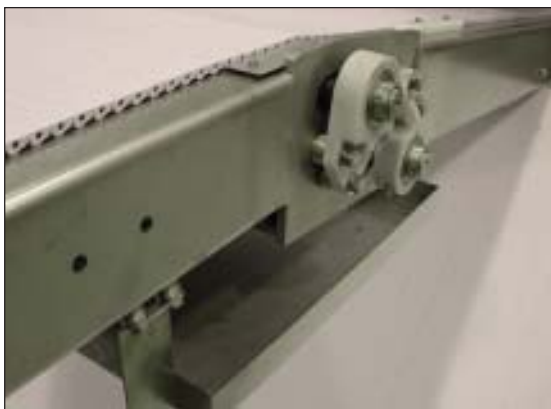

## **Specifications Matter!**

**Moline now offers Level I and Level II equipment for industrial users.**

All Moline equipment is heavy duty and designed for continuous use. However, many users do not require, or want to pay for, high pressure washdown duty features or the ergonomic controls of our Level II equipment (NEMA 4X electrical panels, stainless steel conduit runs and continuous welded frames).

Level I specifications can reduce system prices by 10% but are still durable, reliable, BISSC certified and easy to maintain.

**Standard Level I features:**  
**Stand-off mounting,**  
**outboard bearings.**

**Standard Level II features:**  
**TENV stainless steel**  
**frame motors.**

**Level II: Operator interface**  
**mounted in articulating**  
**panel.**
